

I agree in principle with this proposal. I would respectfully disagree with the following points:

1: I prefer keeping the 5 WPM Morse Code requirement for ANY operation below 30 MHz.

2: I see no need to drop examination retesting. (Item 30) Retesting is at the option of the Volunteer Examiner team, and they have the right to offer retests or not. If the team considers it a hardship, they have the option to refuse a retest request. This should not change. In my view, as leader of a VE team, this is adequate.
